- Regarding claims 1 and 2

The inventions described in claims 1 and 2 do not appear to involve an inventive step based on documents 4 through 6. Filling a translucent material in a recessed portion is indicated in document 5 (Fig. 5), and using a well-known resin as a filling material is an obvious matter. Also, configuring a filling material using a plurality of layers in accordance with necessary properties is indicated in document 4, and bonding a window plate to improve mechanical strength is indicated in cited document 6 (Fig. 9). Collecting such technologies to configure the inventions described in claims 1 and 2 could be easily conceived of by a party skilled in the art.

- Regarding claims 3 and 4

The inventions described in claims 3 and 4 do not appear to involve an inventive step based on documents 3 through 6. Document 3 (Figs. 1 and 4) indicates forming a resin film on a surface opposite an illuminated side and forming a filler electrode that penetrates the resin film.

- Regarding claim 5

The invention described in claim 5 does not appear to involve an inventive step based on documents 3 through 8. As indicated in documents 7 and 8, for dicing a semiconductor device, providing an opening at an intersection of dicing lines in advance to form a shape so that each diced portion is cut away is a well-known art.
